

FEDERICO FEDERICI

NOTIONS

(about the object under investigation)

[workbook of the universe]

[talk on YouTube]

<http://federicofederici.net>

[it] can be partitioned into finitely many parts to be shifted by a rigid motion and reassembled into an object whose extensive properties are the same as the original one

the value of any quantity is measurable, at any time and to an arbitrary accuracy, without significantly influencing the original state of the system

[what] the writer and the reader interact with does not require shifts, nor transitional signs

signification rests on a presemantic underpinning of some sort in the writing | reading process

both approaches fail to hold

geometrical entities consist of an uncountable number of null sets [points] – infinity does not compensate for zero

a measurement is both an operational procedure about the observable and a phenomenon in itself, subject to the same laws it investigates

a not negligible interaction is established between the measuring apparatus and the investigated system

the act of measurement determines the value of the

observable

transition

from possible to actual

words consist of an arbitrary number of unstable subsets [signs] – signification does not compensate for the temporary | seeming meaninglessness

a word is both a procedure defining the object it points to and a phenomenon in itself, subject to the same laws it investigates

writing does not reveal some pre-existing value of the written word: how the particular outcome of signification is brought into being is inherently

unknowable

transition

from sign to word

OF

[hidden signs theorem] text-objects
[possess properties that] exceed
reading

the reading process establishes an
unstable interaction with their state

[sufficient criterion of reality] an
element of reality exists if the corre-
sponding value of a physical quan-
tity can with certainty be predicted
without disturbing the system, the
latter being in an eigenstate of the
observable associated with that value

```

" " " " " " " "
" " " " " " "
" " " " " " "
" " " " " " "
" " " " " " "
" " " " " " "

```

[alleged] indeterminacy of a grid of
removed signification: some metrics
is always implied

[minimal requirement | calibration
condition] whenever the system is
in an eigenstate, the apparatus indi-
cates the corresponding eigenvalue
after the interaction has ceased

[objectification problem
collapse problem

in the text-environment]

IF{
an observable has no definite value,
the object-plus-apparatus is in an
entangled state}
| eigen – | gegen | entangled |

a configuration of signs | words ex-
ists characterized by some recognis-
able signification • a spike triggers its
collapse • a wave of signification Ψ
attempts to constrain the dynamic}

IF{
an account of the measuring pro-
cess is required for semantic com-
pleteness, the system is semantically
inconsistent}

it sets and retains the signification
field wherein the word-sign duality
manifests itself • it is both the outer
frame and the inner law}

[what means for an observable to
have a definite value]

other signs | words • strata of fos-
silated languages surface

the tension between the collapse
process [random event] and the de-
terministic dynamics of
a closed system

the method translates semantic colli-
sions into [semi]-structured domains
of heterogeneous signs
[open text-environment]

a measurement scheme that leaves
the state of the object unchanged
defines a trivial observable whose
measure probability is independent
of the state itself

a writing scheme that leaves the
state of signification of the signs un-
changed defines a trivial text-object
whose likely signification is inde-
pendent of the state itself

the notion of instrument describes
the state changes that follow an act
of measurement

the notion of reader describes the
signification changes that follow an
act of writing

neither a mere spectator • nor indeed a character

no information gain without some
disturbance

to write is to disturb text-objects

to measure is to disturb
the object-system

not to reify an idealised notion of it
