

What is energy? If no one asks me, I know: if I wish to explain it to one who asks me, I no longer know. Indeed, nothing concrete. A principle governs Nature: the universe is a number split up into series of tinier and tinier addends recombined or reordered according to a complex of interactions. No exception to this law is known. Following the procedure in the caption, the artist is invited to an experiment with this, collecting energy frames from a burning *pinus nigra* needle. A number of variations on the flame primordial hieroglyph will efface the material space of writing and found the alphabet of the fire. Paper will no longer be the site where the sign resides,

but what the breach. Each depend on the sheet to the in turn, is a series of more variables re-tree (size, age, soil properties all of these ping upon and stability

*Place the verso of the dotted square near a burning pine needle for a few seconds, then repeat the procedure with the next page. After the flame has extinguished, unbind the book and ship the used sheets to the appointed art collection centre.*

sign must sign will de-angle of the flame which, fected by a or less hidden lated to the desiccation, etc.). While factors im-the integrity of the alpha-

bet, the amount of ing the combustion get stored in and be number of sheets into signs, will set tween what is burn-to burn, between the the one to write. The will once again get one knows what

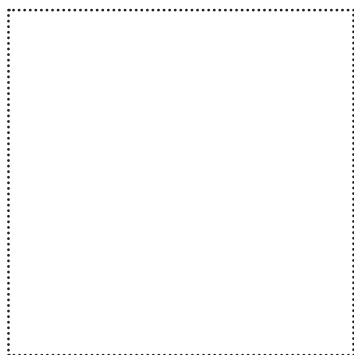

energy released dur-will, to some degree, proportional to the used. The fire, split itself as a thread being and what is about thought thing and very idea of writing reified, although no energy is.

Workbook of the Universe

Workbook of the Universe  
*how to split the universe up into addends*

*addend n.    from a pinus nigra needle burning in the universe*

What is energy? If no one asks me, I know: if I wish to explain it to one who asks me, I no longer know. Indeed, nothing concrete. A principle governs Nature: the universe is a number split up into series of tinier and tinier addends recombined or reordered according to a complex of interactions. No exception to this law is known. Following the procedure in the caption, the artist is invited to an experiment with this, collecting energy frames from a burning *pinus nigra* needle. A number of variations on the flame primordial hieroglyph will efface the material space of writing and found the alphabet of the fire. Paper will no longer be the site where the sign resides,

but what the breach. Each depend on the sheet to the in turn, is a series of more variables re-tree (size, age, soil properties all of these ping upon and stability

*Place the verso of the dotted square near a burning pine needle for a few seconds, then repeat the procedure with the next page. After the flame has extinguished, unbind the book and ship the used sheets to the appointed art collection centre.*

sign must sign will de-angle of the flame which, fected by a or less hidden lated to the desiccation, etc.). While factors im-the integrity of the alpha-

bet, the amount of ing the combustion get stored in and be number of sheets into signs, will set tween what is burn-to burn, between the the one to write. The will once again get one knows what

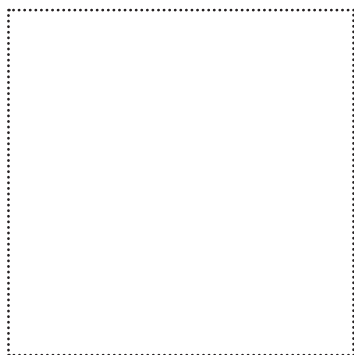

energy released dur-will, to some degree, proportional to the used. The fire, split itself as a thread being and what is about thought thing and very idea of writing reified, although no energy is.

*Place the verso of the dotted square near a burning pine needle for a few seconds, then repeat the procedure with the next page. After the flame has extinguished, unbind the book and ship the used sheets to the appointed art collection centre.*

sign must sign will de-angle of the flame which, fected by a or less hidden lated to the desiccation, etc.). While factors im-the integrity of the alpha-

energy released dur-will, to some degree, proportional to the used. The fire, split itself as a thread being and what is about thought thing and very idea of writing reified, although no energy is.

Workbook of the Universe  
*how to split the universe up into addends*

*addend n.    from a pinus nigra needle burning in the universe*

What is energy? If no one asks me, I know: if I wish to explain it to one who asks me, I no longer know. Indeed, nothing concrete. A principle governs Nature: the universe is a number split up into series of tinier and tinier addends recombined or reordered according to a complex of interactions. No exception to this law is known. Following the procedure in the caption, the artist is invited to an experiment with this, collecting energy frames from a burning *pinus nigra* needle. A number of variations on the flame primordial hieroglyph will efface the material space of writing and found the alphabet of the fire. Paper will no longer be the site where the sign resides,

*how to split the universe up into addends*

*addend n.    from a pinus nigra needle burning in the universe*

What is energy? If no one asks me, I know: if I wish to explain it to one who asks me, I no longer know. Indeed, nothing concrete. A principle governs Nature: the universe is a number split up into series of tinier and tinier addends recombined or reordered according to a complex of interactions. No exception to this law is known. Following the procedure in the caption, the artist is invited to an experiment with this, collecting energy frames from a burning *pinus nigra* needle. A number of variations on the flame primordial hieroglyph will efface the material space of writing and found the alphabet of the fire. Paper will no longer be the site where the sign resides,

but what the breach. Each depend on the sheet to the in turn, is a series of more variables re-tree (size, age, soil properties all of these ping upon and stability

*Place the verso of the dotted square near a burning pine needle for a few seconds, then repeat the procedure with the next page. After the flame has extinguished, unbind the book and ship the used sheets to the appointed art collection centre.*

sign must sign will de-angle of the flame which, fected by a or less hidden lated to the desiccation, etc.). While factors im-the integrity of the alpha-

bet, the amount of ing the combustion get stored in and be number of sheets into signs, will set tween what is burn-to burn, between the the one to write. The will once again get one knows what

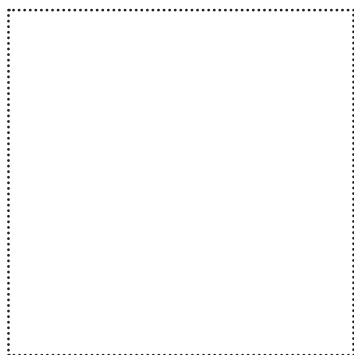

energy released dur-will, to some degree, proportional to the used. The fire, split itself as a thread being and what is about thought thing and very idea of writing reified, although no energy is.
