15M Glossary

 [...] It has been chosen to refer each of the terms (words and word compounds) to other notions that would be part of a kind of conceptual niches. For this, two types of references are proposed: on the one hand what they "imply", referring to some of the terms with which they find themselves in "collaborative" or conjunctive neighborhood relations; and on the other hand, the terms that “cancel or relativize”, understood not as annulment but rather as a displacement to non-dominant positions, what we would call disjunctive relations. Therefore the relation with other terms of the already existing discourses is not that of a mere opposition (it will be so until another term arises that replaces them convincingly); they talk about other things, intrude with new questions, trigger new ideas: symptoms of new ways of thinking.
