

BLOD

SWIMMING POOL

Nix research

Copyright Annika Boholm, april 2018.

Blod.

sid 2.

SCENE 1a, INT. SWIMMING POOL - DAY

Locked camera. Panning "around" pool - so that mirror image of room is upside down in the water. Camera stops at a pair of feet - belonging to the woman.

SCENE 1b, INT. SWIMMING POOL - DAY

Locked camera

The woman dives, down into the upside down room.

SCENE 2, INT. SWIMMING POOL - DAY

Locked camera

The woman treads water. The doctor is sitting on a starting block.

The doctor:

We want to remove your uterus.

The woman:

(Moves her head: Because?)

The doctor:

We are pretty sure it is cancer.

Blod.

sid 3.

SCENE 3, INT. SWIMMING POOL - DAY

Locked camera

The doctor is on the stairs. The woman's still treading water.

The Woman:

How do you fasten..... or does it hang loose?

The Doctor:

The vagina is held in place by surrounding tissue.

The Woman:

And at the top... up... in...?

The Doctor:

It doesn't enter the abdomen like an open pipe. We close it with a few stitches.

The woman is listening. (Trying to imagine it all.)

The Doctor:

No man will feel the stitches.

Long pause.

The Woman:

What will happen to my sex life? Will I...?

The Doctor:

I can't say anything about that. There is no research into the sexual side effects.

Blod.

sid 4.

SCENE 4, INT. SWIMMING POOL - DAY

Locked camera

The woman treads water. The Doctor sits on the edge of the pool.

The Doctor:

No one has done any research on that. Yet.

Long pause.

The Woman:

Will I be able to become wet?

The Doctor:

Unfortunately, there is no research into the effect of the ovaries on lubrication.

SCENE 5, INT. SWIMMING POOL - DAY

Locked camera

The woman and the doctor are both treading water.

The Woman:

Orgasm?

The Doctor has no time to answer.

The Woman:

No research there either?

The Doctor:

(Shakes his head.)
